

EXPERIMENT 4

TASK ANALYSIS AND USER FLOW DESIGN FOR ONLINE SHOPPING APPLICATION

NAME: Merlyn Sosa Saju

REGISTER NUMBER: 240701309

AIM:

To conduct task analysis for an online shopping application, document user flows, and create corresponding wireframes for improving user interaction and usability.

PROCEDURE:

User Flow Tasks for E-Commerce App

Step 1: Main Tasks

1. Browse Products
2. Search Products
3. Add Products to Cart
4. Checkout

Step 2: User Flows

1. Browsing Products

- Home Screen
- Select Category
- View Product List
- Open Product Details

Flow:

Home Screen → Categories → Product List → Product Details

2. Searching for a Product

- Open Search Bar

- Enter Product Name
- View Search Results
- Open Product Details

Flow:

Search → Enter Query → Search Results → Product Details

3. Adding Product to Cart

- View Products
- Open Product Details
- Click “Add to Cart”

Flow:

View Products → Product Details → Add to Cart

4. Checkout Process

- Open Cart
- Review Products
- Proceed to Checkout
- Enter Shipping Details
- Enter Payment Details
- Place Order

Flow:

Cart → Review Cart → Checkout → Shipping Info → Payment Info → Place Order

Creating User Flows in Lucidchart

Step 1: Create Diagram

1. Open [Lucidchart](#) and create a new document.
2. Choose a blank flowchart template.

Step 2: Add Shapes

- Rectangles → Actions

- Diamonds → Decisions
- Ovals → Start/End

Step 3: Connect Steps

- Use arrows to connect each process step.
- Arrange the flow logically from start to finish.

Step 4: Add Details

Include short descriptions such as:

- Login/Register
- Browse Products
- Add to Cart
- Checkout
- Track Orders

Step 5: Save & Share

1. Review the flowchart.
2. Save the diagram.
3. Share or export it as PDF/image.

Example User Flows

Login/Register

Open App → Login/Register → Enter Details → Verify → Home Screen

Browse/Search

Categories/Search → View Products → Product Details

Add to Cart

Product Details → Select Options → Add to Cart

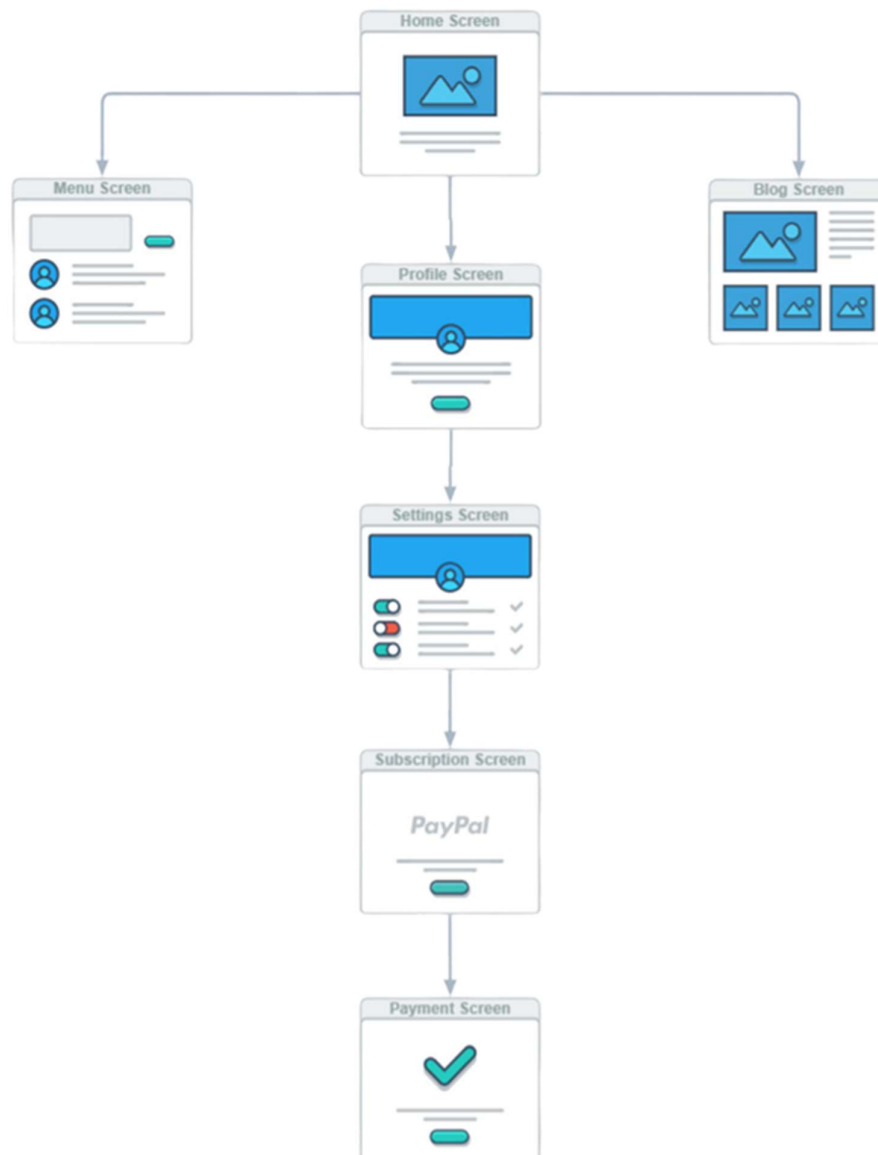

Checkout

Review Cart → Shipping Info → Payment → Place Order

Order Tracking

My Orders → Select Order → View Tracking Details

OUTPUT:

RESULT

The task analysis and user flow design successfully identified the important user interactions in the online shopping application. The wireframes provided a clear structure for navigation and improved usability.
