

EXPERIMENT 9

DESIGN INPUT FORMS THAT VALIDATE DATA (E.G., EMAIL, PHONE NUMBER) AND DISPLAY ERROR MESSAGES USING HTML/CSS, JAVASCRIPT (WITH VALIDATOR.JS)

NAME: Merlyn Sosa Saju

REGISTER NUMBER: 240701309

AIM:

The aim is to design input forms that validate data, such as email and phone number, and display error messages using HTML/CSS and JavaScript with Validator.js.

PROCEDURE:

HTML:

```
<!DOCTYPE html>

<html lang="en">

<head>

  <meta charset="UTF-8">

  <meta name="viewport" content="width=device-width, initial-scale=1.0">

  <title>Form Validation</title>

  <!-- CSS File -->

  <link rel="stylesheet" href="style.css">

</head>

<body>

  <div class="container">

    <form id="myForm">

      <label for="email">Email:</label>

      <input
```

```

        type="email"
        id="email"
        name="email"
        required>      >
    <span id="emailError" class="error"></span>
    <label for="phone">Phone Number:</label>
    <input
        type="text"
        id="phone"
        name="phone"
        required >
    <span id="phoneError" class="error"></span>
    <button type="submit">Submit</button>

</form>

</div>

<!-- Validator.js CDN -->

<script
src="https://cdnjs.cloudflare.com/ajax/libs/validator/13.6.0/validator.min.js"></
script>

<!-- JavaScript File -->

<script src="script.js"></script>

</body>

</html>

```

CSS:

```
body {  
    font-family: Arial, sans-serif;  
    background-color: #f4f4f4;  
    display: flex;  
    justify-content: center;  
    align-items: center;  
    height: 100vh;  
    margin: 0;  
}  
  
.container {  
    background-color: white;  
    padding: 20px;  
    border-radius: 5px;  
    box-shadow: 0 0 10px rgba(0, 0, 0, 0.1);  
}  
  
form {  
    display: flex;  
    flex-direction: column;  
}  
  
label {  
    margin-bottom: 5px;  
}  
  
input {  
    margin-bottom: 10px;  
    padding: 10px;
```

```
border: 1px solid #ccc;
border-radius: 3px;
}
button {
padding: 10px;
background-color: #28a745;
color: white;
border: none;
border-radius: 3px;
cursor: pointer;
}
button:hover {
background-color: #218838;
}
.error {
color: red;
font-size: 0.875em;
}
```

JAVASCRIPT:

```
document.getElementById('myForm').addEventListener('submit', function (e) {
    e.preventDefault();
    // Get input values
    let email = document.getElementById('email').value;
    let phone = document.getElementById('phone').value;
    // Get error elements
```

```
let emailError = document.getElementById('emailError');
let phoneError = document.getElementById('phoneError');
// Clear previous errors
emailError.textContent = "";
phoneError.textContent = "";
// Validate Email
if (!validator.isEmail(email)) {
    emailError.textContent = 'Please enter a valid email address.';
}
// Validate Phone Number
if (!validator.isMobilePhone(phone, 'any')) {
    phoneError.textContent = 'Please enter a valid phone number.';
}
// If valid, display values
if (
    validator.isEmail(email) &&
    validator.isMobilePhone(phone, 'any')
) {
    console.log('Email:', email);
    console.log('Phone:', phone);
    alert('Form submitted successfully!');
}
});
```

OUTPUT:

The image displays two screenshots of a web form, illustrating the output of a validation process. The top screenshot shows a successful submission where the email field contains 'john.doe@example.com' and the phone number field contains '+91 9876543210'. A green 'Submit' button is visible below the fields. The bottom screenshot shows the same form after an invalid submission. The email field now contains 'john.doe@com', and a red error message 'Please enter a valid email address.' is displayed below it. The phone number field contains '12345', and a red error message 'Please enter a valid phone number.' is displayed below it. A green 'Submit' button is still present at the bottom.

Email:
john.doe@example.com

Phone Number:
+91 9876543210

Submit

Email:
john.doe@com

Please enter a valid email address.

Phone Number:
12345

Please enter a valid phone number.

Submit

RESULT

The form successfully validates email and phone number inputs using Validator.js. It improves user experience by preventing invalid data submission and displaying error messages instantly.
