

EXPERIMENT 3

CREATE A PROTOTYPE WITH FAMILIAR AND UNFAMILIAR NAVIGATION ELEMENTS. EVALUATE EASE OF USE WITH DIFFERENT USER GROUPS USING *proto.io*

NAME: Merlyn Sosa Saju

REGISTER NUMBER: 240701309

AIM:

The aim is to develop a prototype incorporating both familiar and novel navigation elements and assess usability among diverse user groups using Proto.io.

PROCEDURE:

Step 1: Plan the Prototype

1. Identify:
 - Familiar elements → menus, tabs, buttons
 - Unfamiliar elements → gestures, hidden menus, voice controls
2. Create simple wireframes before designing.

Step 2: Create Project in Proto.io

1. Log in and create a new project.
2. Choose a template or start with a blank project.

Step 3: Design Screens

1. Add familiar navigation components.
2. Add experimental navigation features.
3. Connect screens using interactions and transitions.

Step 4: User Testing

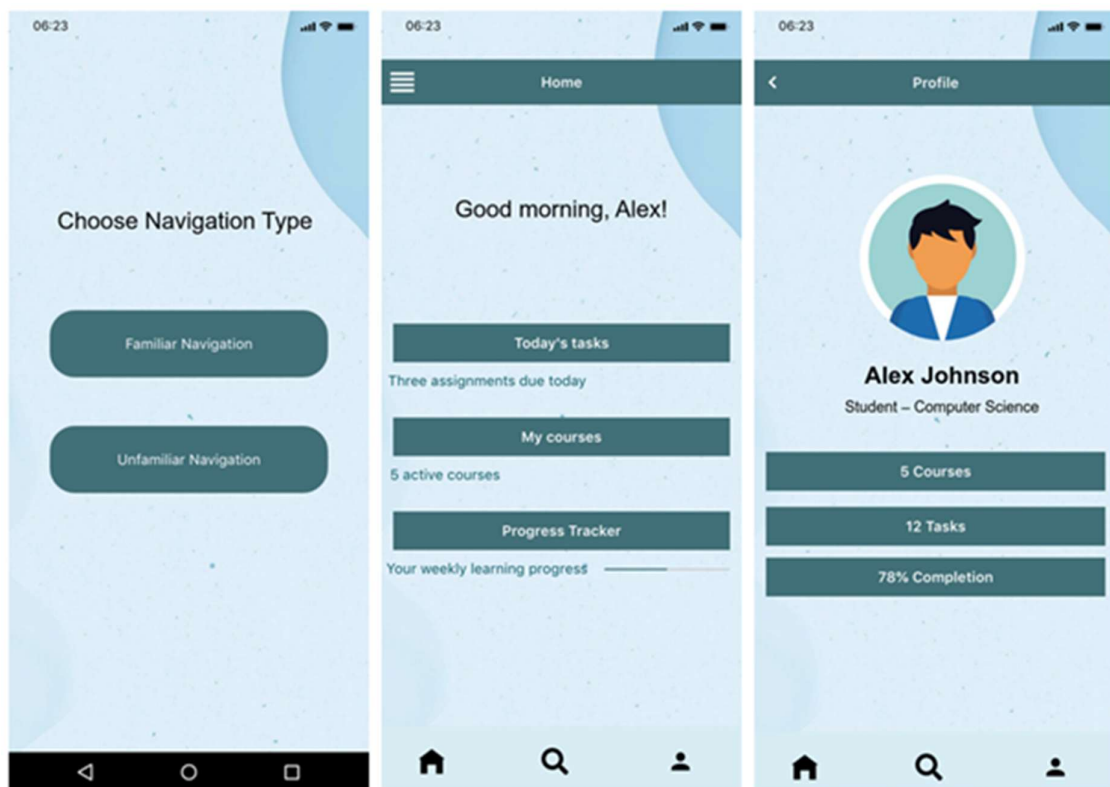

1. Recruit different user groups.

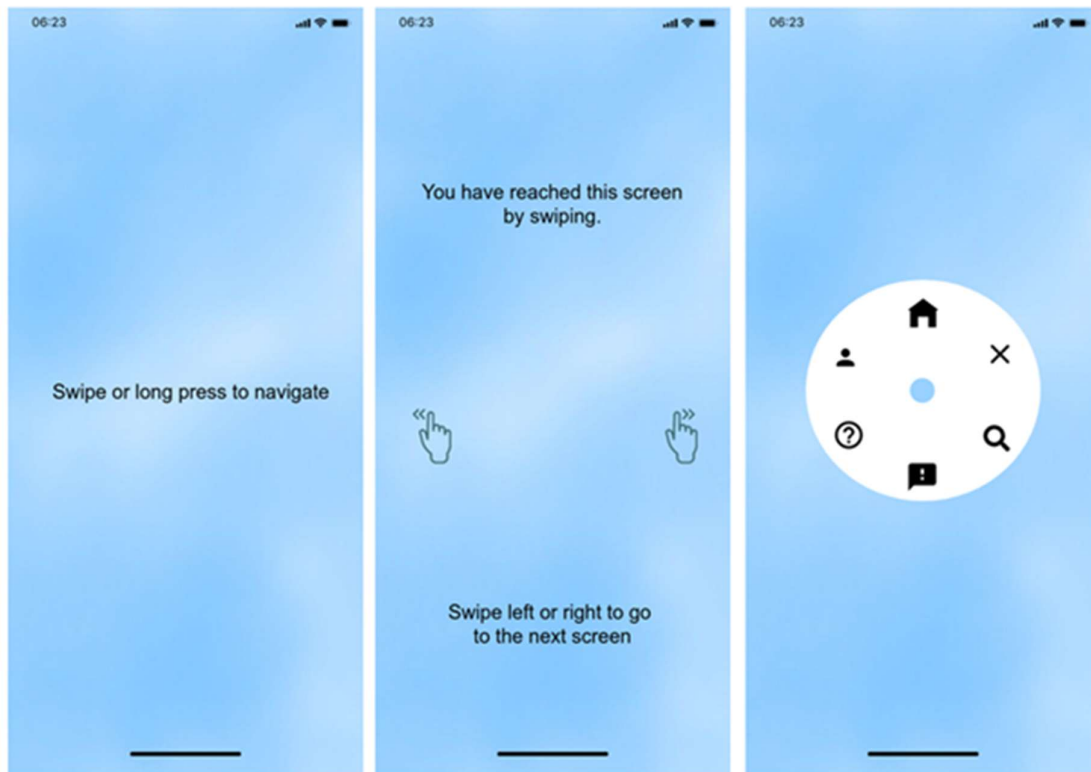

2. Share the prototype link for testing.
3. Ask users to complete tasks and collect feedback.

Step 5: Analyze Results

1. Observe how users interact with each navigation style.
2. Compare user responses and usability performance.
3. Summarize findings and improvement suggestions.

OUTPUT:

RESULT

The experiment showed that users completed tasks faster and with fewer errors using familiar navigation elements. Beginner users found unfamiliar navigation confusing, while experienced users adapted more quickly. Familiar navigation improved usability and user satisfaction.
